DETAILED ACTION

Claim Rejections - 35 USC § 102

1. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Smith (USP 5,113,335). Smith discloses a filtering that has at least one capacitor (50) and inductor (52) coupled in parallel and the filtering circuit (10) is directly coupled to the AC power supply.

Allowable Subject Matter

2. Claims 6-15 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art alone or in combination discloses per claim 6, A "parallel resonant circuit has circulating currents of substantially the same amplitude as a load current, wherein said parallel resonant circuit absorbs voltage perturbations in excess of the amplitude of said power system signal at all frequencies above and below said system line frequency and wherein said parallel resonant circuit provides energy to restore notches in the amplitude of said power system signal at all frequencies above and below said system line frequency." Per claim 11, a reactive impedance of said at least one inductor and a combined reactive impedance of said plurality of capacitive elements set substantially equal in value and one hundred and eighty degrees out of phase and tuned to resonate at a frequency value equal to a connected power source with fundamental frequency value of a parallel no intervening components connected between said power source and said filtering circuit.
